Mr. Matthew T. Wallen
Director
Office of Public Assistance, Governmental
Affairs & Compliance
Surface Transportation Board
395 E Street, SW
Washington, DC 20423

Dear Director Wallen:

Please find enclosed the status report for the month of April 2010 on operational matters related to CN's acquisition of the major portion of the Elgin, Joliet and Eastern Railway Company (EJ&E), as required in the Board's final decision served December 24, 2008 approving this transaction.

The enclosed report provides information on the following operational matters:

- *Interchanges:* the report lists the number of cars interchanged at each interchange location on the EJ&E for April 2010 (with separate sheets showing cars delivered, cars received, and total cars interchanged), and includes a comparison of April 2009 and April 2010 interchange numbers at each location.
- *Railroad at-grade crossings:* the report identifies delays at railroad interlockings along the EJ&E line that occurred during April 2010.
- *Accidents and injuries:* the report provides the date and descriptive information about each accident and injury that occurred on the EJ&E line or on CN lines through Chicago during April 2010.

As the Board is aware, CN has submitted in our previous operations monitoring reports the accidents, incidents, and injuries reported by CN to FRA on FRA Form F6180.54 (Rail Equipment Accident/Incident Report) or FRA Form F6180.55a (Railroad Injury or Illness Summary). Accidents, incidents, and injuries reported on these forms exceed either FRA's monetary threshold (\$8,900 in 2009 and \$9,200 in 2010) for reporting rail equipment accidents and incidents or FRA's threshold for reporting death, injury or occupational illness. CN has not included in our past reports accidents and injuries included on other FRA reports that do not meet the reporting thresholds noted above.

To ensure that the Board is aware of all grade crossing accidents that occur along the EJ&E line or on CN lines through Chicago, and consistent with HDR's recommendation in its audit task on reporting of operational incident, the enclosed report and our future reports will include for these lines all accidents and injuries reported to FRA, regardless of whether they fall below FRA's thresholds of significance. In addition, CN plans to refile all prior reports supplemented to include such additional accidents and injuries.

Finally, please note that we have changed the description of the CN lines covered by this report from those "within the EJ&E arc" to the CN lines "through Chicago." This was done to reflect more accurately the fact that beginning with October 2009 our reports have covered three additional segments in accordance with Decision No. 21, including one – Matteson to University Park – which is actually outside the EJ&E arc.

- *Street crossing blockages*: the report provides data concerning each instance during April 2010 where a crossing was blocked for 10 minutes or more.

As the Board knows, CN previously provided data in its operations monitoring reports on crossings blocked for 10 minutes or more by stopped trains. As the Board directed in its Decision No. 23, served April 21, 2010, CN provided to the Board on April 26, 2010, all historical data for the previous 33 months for EJ&E crossings equipped with Remote Terminal Units (RTUs), which show all instances of automated crossing warning device (ACWD) activations for 10 minutes or more, regardless of the cause. CN also resubmitted the crossing blockage sections of all previous operations monitoring reports restated to include added RTU data drawn from the raw data, and submitted its dispatcher spreadsheets from April 2009, when CN first began to use them to prepare its monthly monitoring reports, through March 2010, the date of its last report.

In accordance with Decision No. 23, we are submitting the following two items as part of our April 2010 report: (1) summary sheets and complete raw RTU data received from our vendor, Progress Rail, relating to ACWD activations for 10 minutes or more for the entire EJ&E line for April 2010; and (2) a monthly blocked crossing report for April 2010, which includes all known ACWD activations of 10 minutes or more.

The blocked crossing report combines the blocked crossing information from CN's dispatcher spreadsheets with all additional ACWD activations of 10 minutes or more identified by Progress Rail from its raw RTU data that were not originally captured in the dispatcher spreadsheets. As discussed in the cover letter to CN's April 26, 2010 data submission, the data provided by Progress Rail does not include information for the Train ID, Community, or Comment columns of the report. Where CN has been able to determine that information, it has added it; where it is has not, it has left that information blank. Since the April 26 data submission, Progress Rail has completed an algorithm that allows it to provide the delay time (*i.e.*, duration) for each ACWD activation of 10 minutes or more. Accordingly, this information has been provided for all entries. In a small number of instances, the duration provided by the Progress Rail RTU data varied from that in the dispatcher spreadsheet. In those cases, we have used the Progress Rail RTU data.

Given the large number of entries now included in this report, CN has not attempted in this report to address corrective actions on a line-by-line basis as it has voluntarily done in the past for its much shorter reports of blocked crossings involving trains stopped for 10 minutes or more. Instead, in accordance with Decision No. 16 (see Final Mitigation Condition #2, page 73), CN intends to address corrective actions in its quarterly reports.

In preparing this first combined report, CN discovered that the time of events in the Progress Rail RTU data was stated on a different basis than CN's dispatcher spreadsheets. Whereas CN's dispatcher spreadsheets state the approximate time for each ACWD activation in Central Standard Time (CST) from the beginning of the activation, the times provided in the Progress Rail RTU data are stated in Greenwich Mean Time (GMT) from the time of the notification that the ACWD activation has reached ten minutes. Therefore, for both reporting purposes and to match the Progress Rail RTU data to the dispatcher spreadsheets, CN had to subtract 5 hours and 10 minutes from each entry in the Progress Rail data in order to convert it to the same local-time basis as reported in the dispatcher spreadsheets (*i.e.*, CST from the time the ACWD is first activated). As a result of this conversion, the combined report includes eleven ACWD activations from the

Progress Rail RTU data that, when restated to CST, occurred on March 31, 2010, rather than April 1, 2010. Likewise, this means that ACWD activations of 10 minutes or more from the early hours of May 1, 2010 were not provided by Progress Rail as part of its April, 2010 data, even though on a restated CST basis they would be included in the April data. CN has discussed these issues with Progress Rail and will work with it to try to eliminate this time and date mismatch for its future reports.

CN's dispatcher spreadsheets captured most of the ACWD activations for 10 minutes or more identified in the Progress Rail RTU data, but not all. Therefore, as noted above, CN added the additional ACWD activations identified in the Progress Rail data to the combined spreadsheet it is filing today. There are several reasons for the differences between the data originally captured in CN's dispatcher spreadsheets and the Progress Rail RTU data. In many instances, most notably for significant time periods on April 7 - 10, and on April 14, it appears that, due to malfunctions with the RTU system, notifications of ACWD activations of 10 minutes or more were not transmitted to CN. The RTU system relies on computer servers and the cellular network to transmit data, and these systems occasionally experience service disruptions that can cause such transmission failures and errors.

Part of the difference between the ACWD activations listed in the dispatcher spreadsheets and the Progress Rail RTU data also appears to be due to dispatchers early in the month failing to capture all activation notices related to private crossings, particularly Marina Lot Drive, which is a seldom used road closed by a locked gate. In addition, some differences were likely attributable to human error. We will continue to explore such differences and others that may arise with Progress Rail and within CN, but welcome any questions the Board may have regarding these differences. We also point out that, toward the end of April, CN's new more automated process for generating monthly blocked crossing reports went on line. CN expects this new process to help minimize future differences.

Finally, without trying to catalogue all of the issues with the RTU data, there are two other particularly noteworthy ways in which the data are either erroneous or potentially misleading with respect to the current report.

First, the 224 reported activations at Woodruff Road do not appear to indicate a cause for significant concern. Charlesworth Avenue, an alternative grade-separated road, is available at that location providing passage for cars, even when Woodruff Road itself is blocked. In addition, we learned recently that the number of notifications of ACWD activations of 10 minutes or more at the Woodruff Road crossing may be misstated.

Throughout the spring, Progress Rail and CN have been using the Woodruff Road crossing to test CN's web-based Active Crossing System, which is designed to allow emergency responders to see when certain crossings are activated. To make the system work, Progress Rail has had to reprogram the Woodruff Road RTU and the central RTU server in Cincinnati that receives the alarms sent by the RTU, and it is possible that at various times the system generated alarms when the gates were not down and failed to generate alarms when the gates were down. Progress Rail believes the system is now functioning properly and it should be able to reprogram the RTUs at other crossings with minimal service disruptions.

Second, the RTU data from Progress Rail incorrectly and misleadingly indicates that there were eight blockages of greater than 100 minutes. One of these was at Woodruff Avenue, which, as noted above, may have been due to the installation of ACS and does not, in any event, appear to be cause for great concern. Two more of these blockages occurred at Marina Lot Drive, which, as discussed above, is essentially a closed private crossing. A fourth, the 177 minute blockage at Broad Street on April 29, appears to have been caused by maintenance issues rather than operations. A fifth, the 145 minute blockage at Euclid Avenue on April 21, has been confirmed by Progress Rail to have been erroneously reported. It appears to have been activated no more than 11 minutes. (In order to remain consistent with Progress Rail's raw data, CN has not modified the time for this blockage in its report.) This leaves three blockages of 100 or more minutes, one each at Old Locks Road, Western Avenue, and Chicago Avenue. CN intends to continue to investigate each, none of which appeared in its dispatcher logs.

- *Train volumes:* the report provides train counts for operations over segments of EJ&E's principal lines and on CN lines through Chicago during April 2010.

Please also note the following updates regarding our operations and related activities on the EJ&E.

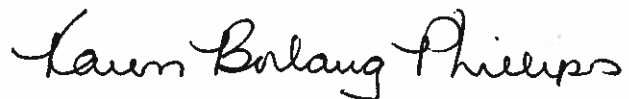

- During April 2010, we added and removed a number of trains operating over the EJ&E, resulting in a net gain of one train per day, operating in each direction between Kirk Yard in Gary, Indiana and Chicago Heights, Illinois.
- During the weeks of April 12, April 19, and April 26, CN Special Agents and Patrol Officers stationed in Harvey, Illinois worked jointly with CN Dangerous Goods in hosting and presenting a TransCAER field training initiative for members of the Gary, Schererville, and Griffith, IN Fire Departments, and the Matteson, Crest Hill, and Lockport, IL Fire

Departments. TransCAER is aimed at providing first responders with basic railroad incident awareness training covering a wide range of topics, including general railroad/rail yard safety; derailment site safety concerns; CN emergency contact information; CN emergency response plan activation; CN Police & Dangerous Goods functions and responsibilities; emergency response contractors; locomotive and railcar orientation (markings, construction, etc.); tank car identification of pressure and general service cars; tank car safety features, valve configuration and leak repair; and how to read a train consist. This training also provided the opportunity for CN to address issues or concerns raised by these departments and to distribute the CN Police Communication Center toll-free number.

- On April 20, CN Special Agent Eric Graf conducted an Operation Lifesaver presentation and hosted an Operation Lifesaver booth for students attending the West Chicago Middle School in West Chicago, IL. This school is located within 1/4 mile of the EJ&E tracks. A total of 130 students and 40 adults were in attendance.
- On April 28, CN Police Chief Bobby Walker and Assistant Chief David Sprankle met with Richton Park Police Chief Vito Mannino in our ongoing liaison initiative with law enforcement and emergency response agencies along the EJ&E line. An opportunity was afforded to explain CN operations, and a packet of information, including a CN system map and phone stickers identifying the CN Police Communication Center's toll-free number, was distributed.

Please do not hesitate to contact me if you or your colleagues have any questions on this report or need additional information on CN's Chicago-area operations.

Sincerely,

Karen Borlaug Phillips
Vice President – Public and
Government Affairs

Enclosure

Accidents and Incidents

**Accidents on CN lines through Chicago and on EJ&E lines
April 2010 data for May 2010 report**

CN

<u>Event date</u>	<u>Subdivision</u>	<u>Description</u>
04/07/2010	CHICAGO	Crew was performing switching operations on the north end of Markham Yard when two cars derailed. Cause has been identified as human error, which resulted in crossed draw bars that caused the derailment. No injuries, leaks, or hazardous materials exposure.
04/15/2010	CHICAGO	Train crew reported ethanol car was leaking from the top. Car was isolated on track MA 13, Markham Yard. Dangerous Goods Officer (DGO) was contacted. No injuries or hazardous materials exposure.
04/15/2010	CHICAGO	Crew working at industry was shoving 7 loaded cars through the industry's building from south to north when the cars struck the top frame of the north door, damaging the doorframe and door.
04/16/2010	CHICAGO	Train was pulling out of track 2 when a cut of cars was shoved into the side of train, derailing 3 cars.
04/16/2010	CHICAGO	Amtrak struck a vehicle on the Stuenkel Road crossing. The driver of the vehicle was fatally injured. No injuries to the Amtrak crew or passengers were reported.
04/17/2010	CHICAGO	Car being pulled through a switch rode up on top of the switch point and dropped in behind, causing the switch to throw and the following cars to go down the wrong track, resulting in derailment of 3 cars.
04/24/2010	CHICAGO	Crew was switching cars when the coupler on one group of cars did not align completely with the standing cars. As this occurred, the west rail rolled outward, derailing two cars.
04/24/2010	JOLIET	Crew was shoving 4 loaded cars into an industry when the engine climbed the switch point and then dropped in between the rail and derailed.
04/26/2010	JOLIET	Crew was shoving 7 cars into an industry when 2 cars climbed the switch point and derailed.
04/28/2010	CHICAGO	FRA Inspector found car containing hydrochloric acid residue was venting fumes from the top seal. Car was isolated and DGO notified. No injuries or hazardous materials exposure.

EJ&E

<u>Event date</u>	<u>Subdivision</u>	<u>Description</u>
04/04/2010	LEIGHTON	Crew was shoving 7 cars into an industry when the #2 car from the point derailed on top of frog, derailing all 4 wheels.
04/06/2010	MATTESON	Crew was in the process of yarding their train when they reported a loud pop (pressure release), followed by release of carbon dioxide visible down the side of car. Car was isolated and the DGI officer was notified.
04/08/2010	LAKEFRONT	Seven loaded coal cars of train departing the yard derailed when the frog and rail failed under load. All cars were derailed in an upright position.
04/09/2010	LAKEFRONT	Crew was performing hump operations when drawbars on two cars crossed, causing the rail to turn and both cars to be derailed upright.
04/11/2010	LAKEFRONT	Crew was humping cars when one car did not roll far enough, and the next car struck it on the corner. Neither car derailed.
04/13/2010	LAKEFRONT	Brakeman was in the process of coupling to tracks when he reported a carbon dioxide car that appeared to be leaking and then complained of dizziness. Employee was transported to the hospital by ambulance. DGO inspected tank car and found it to be venting properly.
04/13/2010	LAKEFRONT	The crew was pulling 11 cars through the crossover from the second lead to the South Yard when the crew ran through a yard switch, bending the bridle bar on the switch. Nothing derailed.
04/14/2010	MATTESON	Crew switching an industry left a single car with a load of steel coil on Main #2. The car rolled away eastward down Main #2 through the mainline switch and traveled approximately 3 miles before coming to a stop.
04/21/2010	LAKEFRONT	Crew was going through a curve with light engine to pick up 22 empties from an industry when the unit failed to negotiate the curve and derailed 1 axle.
04/22/2010	LAKEFRONT	Hump yard assignment was pulling cars from track when one car derailed one set of trucks and then re-railed itself. Car derailed because top rod was dragging and caught on the derail.
04/28/2010	MATTESON	Crew noticed a slow drip of hydrogen peroxide, aqueous solution, seeping from car. The car was isolated and the DGO notified. No injuries or hazardous materials exposure.

**Injuries on CN lines through Chicago and on EJ&E lines
April 2010 data for May 2010 report**

CN

<u>Event date</u>	<u>Subdivision</u>	<u>Description</u>
04/05/2010	CHICAGO	Employee was walking towards building and tripped on a traffic sign that lay on the ground, causing her to fall and injure right wrist, arm, and ribs.
04/16/2010	CHICAGO	Driver on Stuenkel Road was fatally injured by an Amtrak train.

EJ&E

<u>Event date</u>	<u>Subdivision</u>	<u>Description</u>
04/13/2010	LAKEFRONT	Brakeman was in the process of coupling to tracks when he reported a carbon dioxide car appeared to be leaking, then complained of dizziness. Employee was transported to the hospital by ambulance. DGO inspected tank car and found it to be venting properly. No release, no exposure, and no exceptions taken.

CN will further report this to the FRA as "Claimed but not Admitted" on form F6180.55a, due to the fact that the employee was "treated" for a condition – exposure to chemicals – that did not exist. Inspection found that there was no release and therefore no exposure.
